

Jack Wiegman

IT Developer & System Administrator

Boulder, CO | 720-425-1691 | jawiegman@gmail.com | github.com/jackwiegman

Summary

Computer Science student with technical experience and 8+ years of self-taught programming skills. Love to build things and understand how they work. Strong Linux and Windows system administration background with experience maintaining production SQL Server databases. Comfortable at the command line and building custom solutions for infrastructure and automation.

Technical Skills

Languages:	C, C++, Java, Python, Bash/POSIX Scripting, SQL, HTML/CSS, JavaScript
Systems & Tools:	Linux, Windows Server, RDP, Git, CMake, GDB, SQL DB Management, Backup & Recovery
Concepts:	Computer Architecture, System Design, Data Structures, Algorithms, Database Integrity, Network Fundamentals

Experience

IT Developer & System Administration

University Bicycles, Boulder, CO

January 2023 – Present

- Led Windows 10 to 11 migration across 10+ workstations with minimal operational downtime
- Administer Windows Server 2012 with SQL Server database for retail management software
- Perform database backup operations and integrity validation using SQL query scripts and DBCC commands
- Diagnosed backup issues and disk failure using Linux recovery tools
- Maintain e-commerce website on Workstand platform, implementing minor HTML/CSS modifications
- Provide end-user support and hardware/software troubleshooting for staff and customers
- Managed hardware procurement, deployment, and system upgrades for point-of-sale infrastructure

Projects

8-Bit Assembler & Virtual Machine

C, Assembly [GitHub]

- Designed custom 8-bit CPU simulator with custom instruction set and byte-addressable memory
- Developed assembler parsing assembly source files and generating machine code
- Implemented virtual memory address space executing compiled machine code instructions
- Built register file, stack pointer, and full execution cycle

Team Billing System

C++, PostgreSQL, CMake, Git [GitHub]

- Worked collaboratively with a team to design and build a mock billing system using Git Enterprise
- Designed and implemented Database and API classes with PostgreSQL integration using libpq
- Built database connection layer and helper functions for CRUD operations
- Configured CMake build system with cross-platform presets (Linux/Windows) and libpq dependency integration
- Set up PostgreSQL database schema and connection infrastructure using Supabase

Linux Dotfiles

Bash, Lua, JSON [GitHub]

- Comprehensive system configuration for Arch Linux environment
- Configured systemd boot loader/init, disk partitions, and hyprland window manager
- Custom workflow with CLI tool, terminal emulator, and development tool configurations
- Neovim text editor configuration with LSP and debug adapter support, formatting, and auto-complete

Education

University of Colorado Boulder

2020 – 2022

- Completed coursework in Computer Science fundamentals

Front Range Community College, Larimer, CO

Associate of Science in Computer Science

Expected: May 2026

20-Credit Programming Certificate

Completed (conferring May 2026)

- Relevant coursework: Computer Architecture, Python, Java, Advanced C++, Object Oriented Programming

Additional

- 8+ years programming experience (self-taught since high school)
- Advanced Mathematics: Calculus III, Differential Equations
- Interest in linux/open-source communities, cybersecurity, and CTF competitions
